ABSTRACT:

PROBLEM TO BE SOLVED: To provide a double box container capable of storing or transferring a plurality of parts such as glass base sheets for use in a plane display unit so as to prevent the parts from being broken or the surfaces of them from becoming dirty, and also capable of directly transferring the parts from a clean room to

another clean room.

SOLUTION: This double box container comprises an inner box 50 forming, at its bottom, recesses 68 into which lifting means are inserted, shock absorbing bodies 72, each having a stereonet network structure composed of three- dimensionally interlaced filaments and provided to a bottom plate 70, on which the inner box 50 is placed, so as to absorb a shock, a pallet 6 on which the bottom plate 70, on which the inner box 50 is placed, and the shock absorbing bodies 72 are placed, and which forms recesses 4 into which the lifting means are inserted, and an outer box which is provided on the pallet 6 so as to surround the inner box 50, and which is mounted to the pallet 6 in a detachable or foldable manner.
